

Windows Assignment -2

1. You are the **Windows Server Administrator** for an organization using the domain **tfsi.com**. A DNS server has been installed on Windows Server. Configure the DNS service and create the required DNS records.

Task:

Install the **DNS Server role** on Windows Server

Create Forward Lookup Zone named tfsi.com

Create the following host records:

Host name	Ip Address
Dns01.tfsi.com	A.B.C.D
www.tfsi.com	A.B.C.D
mail.tfsi.com	A.B.C.D

Create Reverse Lookup Zone for A.B.C.D

Create record for the following:

Ip Address	PTR Record
A.B.C.D	Dns01.tfsi.com
A.B.C.D	www.tfsi.com
A.B.C.D	mail.tfsi.com

Verify the DNS Configuration.

2. You are responsible for configuring DNS for a college network using the domain **college.edu**. Create the college.edu Forward Lookup Zone.

Create A records for:

dns01.college.edu
www.college.edu
mail.college.edu

Create a Reverse Lookup Zone for 192.168.50.0/24.

Configure the required PTR records.

Create an MX record for college.edu.

Configure mail.college.edu as the mail server with preference 10.

Verify all records using DNS Manager and nslookup.
