

Windows Assignment -1

1. Create the following local user accounts:

- Student1
- Student2
- Student3

Assign an **initial password** to each user.

Configure each user account so that the user is **required to change the password at the next login**.

2. Create a local security group named:

- ITStudents

Add Student1, Student2, and Student3 to the ITStudents group.

Verify that all three users have been successfully added to the group.

Verify the user account properties and confirm that "**User must change password at next logon**" is enabled for each user.

Log in using one of the newly created accounts and verify that Windows prompts the user to change the initial password.
